Ecology, Evolution and Conservation of Mediterranean Vegetation (RNM-354))

Coordinator: Dr. Pedro José Rey Zamora (prey [arroba] ujaen [punto] es)

Research lines:

- Regeneration and restoration of Mediterranean vegetation
- Evolutionary ecology of plant-animal interactions
- Demographics and Genetics of plant populations
- Adaptive radiations in plants
- Forest science.
- Ecological and evolutionary assembly of Mediterranean plant communities.
- Avifauna and flora conservation in agricultural landscapes.
- Functional genomics of resistance to the drought in plants.
- Biofuel and environment.
- Biodiversity in agricultural systems .
